

It's Never too Early to Plan for Warehouse Efficiency

Over the past eight years RFBS has dealt with both start up and established companies, from the very small to large multi-nationals and all at one time have considered the question of when the right time is to invest in technology to improve their business?

It's not surprising with so many demands on businesses to compete, grow and develop that it can be daunting to consider changing the established routine by bringing in technological solutions to maximize efficiency and productivity. The investment costs, the staff reaction, the perceived risk are some of the factors to be considered.

That's why at RFBS we ask companies to bring us in early, when the thought is still in its infancy so that we can show you the options in action with on-site tours; personalised demonstrations; opportunities to see how the scanning, voice and software would work for your business.

RF scanning technology has been developed and used all over the world for over 30 years and voice technology has a proven record over 20 years so the trialing period has already past, thus the risk to your business is avoided. As for staff reactions, of the companies we have worked with, the warehouse team and those that use the new warehouse systems, never look back and in fact would never want to go back to a manual paper system. Which brings us to the question of cost - there are options to suit all budgets, there are solutions to suit all needs and the ROI is carefully considered when reviewing the choices that would be right for you to grow, develop and compete.

At RFBS, we take the time to get the right solution that works with you now, that grows with you for the future and that most importantly gives you the peace of mind and satisfaction that you have the made a valuable investment.

Your planning for implementation might be now, in 6 months, 12 months or 2 years. Either way now is the time to give us a call on 1300 136 419 so that we can help your company become streamlined and efficient.
